Storage deployment combined with solar can avoid shortages: Large-scale solar + storage deployment is the main option left to avoid power shortages, as they can be deployed much faster than new thermal and hydro assets. By 2027, 100-120 GW of new solar, out of which 50-100 GW co-located with 16-30.

With a record annual capacity addition of 29.52 GW, the total installed renewable energy (RE) capacity in the country has reached 220.10 GW as of 31st March 2025, up from 198.75 GW in the previous fiscal. This performance reflects India's steady advancement towards the target of achieving 500 GW of.

The government has mandated that solar PV projects must incorporate at least 5 percent of their installed capacity with storage. November 18, 2024. By News Bureau In the past decade, India has made monumental strides to grow its renewable energy (RE) capacity, making it one of the world's.
