energy storage cabinets  
produced**

## Overview

---

Nickel cadmium (NiCad) batteries, despite being invented in 1899 and produced in 1906, started to become popular in many formats during the 1970s through to the early 1990s. Who invented the energy storage system?

The first energy storage system was invented in 1859 by the French physicist Gaston Planté . He invented the lead-acid battery, based on galvanic cells made of a lead electrode, an electrode made of lead dioxide ( $PbO_2$ ) and an approx. . 37% aqueous solution of sulfuric acid acting as an electrolyte.

When was the first battery invented?

Very few know that the first battery was invented 2,200 years ago or that in 1970 was reached a critical point when the manufacture of batteries was about to be stopped. About this and other issues, related to energy storage systems, the development and performance in different moments of their evolution, will attend this paper.

What are the different types of energy storage devices?

The need for the storage and backup of electrical power has given rise to the use and development of energy storage devices (ESD) that can store the electrical energy produced. The most widespread and popular ESDs are batteries such as the lead-acid batteries and the lithium-ion batteries, just to name a few. .

Why are batteries important in the 21st century?

Batteries power our world and their relevance will continue to grow as further innovations are made in fields like electric vehicles and the Internet of Things (IoT). The humble battery is by far one of the most crucial enabling technologies of the 21 st Century.

Are next-generation batteries the future of energy storage?

The world needs more power. While lithium-ion is currently shaping our

energy storage strategies and is at the cutting edge of it, researchers are actively looking for next-generation batteries to take energy storage to the next level in increasingly demanding and complex applications such as wearable consumer devices and electric vehicles.

When was a lithium ion battery invented?

The first commercial production of the lithium-ion battery was achieved by Sony in 1991. Since then, it has been the go-to standard for most battery-dependent applications. It is not the only option though, and other batteries were widely used (and still are today in a limited capacity) before it.
