# Which type of energy storage battery is better in Barbados

## Overview

---

Traditional lithium-ion (Li-ion) batteries have served us well, but their limitations are clear. Cycle life is limited, charging is sluggish, and supplies of raw lithium are not only far from infinite but susceptible to geopolitical forces.

Traditional lithium-ion (Li-ion) batteries have served us well, but their limitations are clear. Cycle life is limited, charging is sluggish, and supplies of raw lithium are not only far from infinite but susceptible to geopolitical forces.

As Barbados pursues its ambitious 2030-2035 carbon neutrality target, the question of energy storage looms large. How can we bank the power generated from renewable sources like solar and wind when the sun isn't shining and the breezes falter?

The answer may lie in an innovative new battery.

Barbados is a step closer to launching its first procurement project for Battery Energy Storage Systems to support the grid and unlock stalled Solar PV connections. The Ministry of Energy and Business is currently hosting a three-day Procurement Design Workshop with key stakeholders to discuss and.

The company's urgent need for increased battery energy storage systems (BESS) is driven by the rapid growth of distributed photovoltaic (DPV) systems, which are nearing the current grid's capacity. BL&P's attempt to proactively address this challenge with a request for 90 megawatts (MW) of BESS.

The introduction of battery energy storage systems (BESS) facilities will greatly enhance the island's ability to integrate renewable energy into the grid, stabilise power supply, and reduce dependence on fossil fuels. While the exact battery chemistry in use has not been specified, the emphasis on.

The Government of Barbados has officially launched a major procurement process for the country's first large-scale Battery Energy Storage Systems (BESS), aimed at transforming the national electricity grid and unlocking delayed renewable energy investments. The launch event, hosted by the Ministry.

Battery Energy Storage Systems (BESS) are essential to the renewable energy transition in the Caribbean. In 2018, The Barbados Light & Power Company Ltd @BLPC installed utility-scale energy storage as a component of the 10 MW Solar Photovoltaic (PV) plant in the north of the island at Trent's St.
